In-Situ Concrete Repair Procedure

When undertaking concrete repairs, the following procedure must be followed.

[1MC12-EKF-CV-PRO-C000-000002](#)

This procedure explains how to repair defective concrete while complying with contract specifications. It includes various methods for repairing different types of defective concrete and requires identifying appropriate products and materials through the PMAF process to support repair requirements.

Examples - pictures show a small selection of types of defective concrete:

Void in concrete with exposed reinforcement

Blowholes / pinholes

Chipped surfaces

Linear cracking indicating a potential cold joint
